

**SOM**·hi!

A village for everyone

Pratdip + Planes del Rei + Santa Marina + Les Sorts

Do you want to  
be part of the  
change?

# DNA SOM-hi!

## **A new way of doing municipal politics**

SOM-HI is a group of voters with enthusiasm and willingness, ready to work by listening to everyone and prioritizing the well-being of people.

As indicated by our image, SOM-HI is the SUM OF THE PEOPLE who make up this working group. At the same time, SOM-HI is the SUM OF ALL OF YOU who entrust us with your confidence.

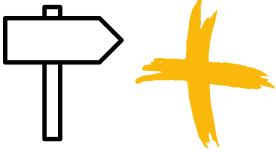

We know the reality of the village and the urbanizations and, always with our feet on the ground, we will work to turn Pratdip into the village we want to live in, with efficient day-to-day management, thinking of people with an open and transparent governance model.

# Our horizons

**The village we want is a vibrant place economically, which respects its natural surroundings, its culture, and its people.**

A village to live in, with access to housing for young people and the necessary services to ensure a good quality of life for its inhabitants. A forward-looking village that allows for progressive and sustainable growth in economic, social, and environmental areas.

That's why we need to work on making responsible use of the natural resources we have, seeking balance by implementing the most suitable energy model that provides economic and environmental benefits for the area. The climate emergency requires us to rethink the water use model, looking for alternatives and improvements in capture and distribution. We also need to manage our natural environment efficiently to make it more resilient or adaptable.

The tourism model we propose is responsible, sustainable, and values the natural environment, culture, and heritage, turning it into an engine for economic development in the town.

Good communication accessibility for people (roads, streets, etc.) must be guaranteed without forgetting the increasingly necessary use of information technologies. And of course, for our town, it is essential to restore relations with the urbanizations with the aim of integrating them into the municipal structure, which benefits everyone.

## Day to day life

The municipality currently has very valuable facilities: sports center, municipal swimming pools, municipal center, multipurpose hall, the Planes del Rei social center, etc. We understand that we need to make appropriate use and maintenance of them, making them more efficient, rehabilitating those that are in poor condition, and improving accessibility for all people. In this way, municipal facilities will be more useful and can be better utilized.

The management of basic services such as water distribution networks, waste management, lighting, sewerage, or gas networks must be of quality, efficiency, and professionalism. We need to find ways to provide access to these services for all residents of Pratdip and work for innovation and improvement of these services and their maintenance.

The care of streets, parks, gardens, and the urban environment is key to offering a consolidated and characterful town image. Among other things, we need to find solutions to the lack of parking in the Pratdip nucleus.

The guarantee of access to new technologies is key to the daily life of the municipality. A stable and fast communications network facilitates people's access to information and the proper development of economic activity, as well as the optimization of the management of public spaces.

Associativism is the soul of Pratdip, and as such, it is necessary to ensure that it remains alive and active through direct support and the establishment of collaboration agreements. In this sense, associations are a fundamental element for the maintenance of our natural and heritage resources, and for the promotion of our culture, festivals, and traditions.

# Services for people and entities

Services for people have a direct impact on their daily lives, which is why they should be given the importance they deserve. We need to consolidate and size up existing services such as the school, the nursery, the day care center, the rural clinic, the gym, or the library.

It is essential to support and advise people on what affects them, defending their rights as users or providing them with the information they need. Based on the meetings we have had with associations and entities, we have found that we need to help alleviate their administrative burden, among other things.

Schools and nurseries make for a lively town and are basic services to ensure the establishment of new families, as well as allowing for family and work reconciliation. In the same line of reconciliation are the services aimed at our elderly people such as day centers, which guarantee attention and care for this group. We need to work for good care services, promoting rural clinics and healthcare activities.

The importance of municipal concessions: we understand them as a service and at the same time, they provide a real benefit to the community. We need to favor their good functioning and viability.

# Communication and transparency

One of the main values of Som-hi! is the new way of doing politics, in which communication and transparency are of utmost importance.

That's why we believe in a two-way communication between residents and the City Council. We will be in continuous contact with associations, organizations, and individuals to learn about any needs that may arise, while providing different tools to facilitate this.

Likewise, channels will be established to inform residents of all decisions made by the City Council, as well as those projects under study that affect the village.

As a governance model based on this principle of communication and transparency, the proposal is to convene open working groups with residents to learn about their opinions on different aspects affecting the municipality.

# Working for the village for a long time

Som-hi! Pradip started as a Working Group in November 2022, when a series of people from different professional and ideological backgrounds started meeting, seeking maximum representation of all residents.

Thinking that municipal management could be done differently, we started working by analyzing the current situation of the municipality, sharing our opinions, and making improvement proposals.

We want to continue representing everyone regardless of the election results, which is why we will continue to work together with the working group as we have done so far.

**Our essence is teamwork and people,  
which goes beyond the electoral list  
we present.**
